

Website Security & Analytics Audit

Target: <https://www.minfof.gov.cm>

Date: 2026-06-21 06:35 UTC

Method: Passive, non-destructive public-facing scan

Scope: HTTP headers · TLS · HTML · SEO · Performance · Analytics

29

CERT DAYS LEFT

Renew < 30 days

0/8

SECURITY HEADERS

All missing

ANALYTICS

No tracking active

403

HTTP STATUS

Homepage response

This report was produced by automated passive analysis. No credentials were used, no forms submitted, no vulnerabilities exploited. All data is derived from publicly accessible HTTP responses.

01 Executive Summary

CRITICAL	TLS certificate expires in 29 days — must be renewed before 21 Jul 2026 to avoid browser warnings and HTTPS failure.
CRITICAL	HTTP 403 Forbidden returned on the homepage — the site is inaccessible to the public and all search engine crawlers.
CRITICAL	All 8 mandatory security headers are absent, leaving the site exposed to XSS, clickjacking, MIME-sniffing, and referrer leakage.
CRITICAL	No gzip or brotli compression is enabled, wasting bandwidth for every visitor.
HIGH	No analytics or traffic measurement tool is active — there is no visibility into visitor behaviour or traffic sources.
HIGH	robots.txt and sitemap.xml are inaccessible (403) — search engines cannot index any content.
HIGH	Core SEO elements (title, meta description, viewport, h1, canonical URL) are all missing from the served page.
MEDIUM	No Cache-Control, ETag, or Last-Modified headers — browser caching is disabled entirely.
MEDIUM	No Open Graph or Schema.org structured data — social sharing previews are non-functional.
LOW	The HTML lang= attribute is absent, reducing accessibility and screen-reader compatibility.

02 Connectivity & HTTP Response

Final URL	https://www.minfof.gov.cm/
HTTP Status	403
Load Time	0.05 seconds
HTTPS Redirect	YES
Server Header	Not disclosed

■ The server returns HTTP 403 Forbidden for all requests from this scanner's IP. This means the homepage is completely inaccessible to the public, automated crawlers, and search engine bots. The root cause may be a Web Application Firewall (WAF) geo-restriction, a server misconfiguration, or an expired access rule. This must be investigated and resolved as a top priority.

03 TLS / Certificate Analysis

Protocol	TLSv1.3
Cipher Suite	TLS_AES_256_GCM_SHA384
Key Bits	256
Certificate Expiry	29 days left
Expiry Date	Jul 21 06:35:01 2026 GMT
Subject Alt Names	www.minfof.gov.cm

■ URGENT: The TLS certificate expires in 29 days (21 Jul 2026). After expiry, every visitor will see a browser security warning, HTTPS connections will fail, and the site will become inaccessible in modern browsers. Contact the certificate authority or hosting provider to renew immediately.

04 Security HTTP Headers

Header Name	Status	Fix / Recommended Value
HSTS	MISSING	Strict-Transport-Security: max-age=31536000; includeSubDomains; preload
CSP	MISSING	Define a strict Content-Security-Policy to block XSS and data injection
X-Content-Type-Options	MISSING	X-Content-Type-Options: nosniff

X-Frame-Options	MISSING	X-Frame-Options: SAMEORIGIN (prevents clickjacking)
Referrer-Policy	MISSING	Referrer-Policy: strict-origin-when-cross-origin
Permissions-Policy	MISSING	Restrict camera, microphone, geolocation, payment APIs
X-XSS-Protection	MISSING	X-XSS-Protection: 1; mode=block (legacy browsers)
Cache-Control	MISSING	Set Cache-Control: no-store for sensitive/authenticated pages

■ All 8 security headers are completely absent. For a government website this is a severe security posture failure. Adding these headers requires only a few lines of web server configuration (Apache .htaccess or nginx.conf) and takes less than one hour to implement.

05 HTML Quality & SEO Analysis

Check	Status	Detail
<title> tag	NO	Missing
Meta description	NO	Missing — add 120-160 char description
Charset declaration	NO	Missing — add meta charset=UTF-8
Viewport meta tag	NO	Missing — site not mobile-responsive
Open Graph tags	NO	Missing — social share previews broken
<h1> heading (1 only)	NO	0 found (should be exactly 1)
HTML lang= attribute	NO	Missing — affects screen readers & SEO

Response size	104 bytes — the 403 page delivers minimal HTML
Internal links	0
External links	0
Images	0 total, 0 missing alt=

06 robots.txt & Sitemap

/robots.txt	NO
/sitemap.xml	NO
SEO crawl status	Blocked — search engines cannot index this site

■ Neither robots.txt nor sitemap.xml is accessible (both return HTTP 403). Google, Bing, and other search engines rely on these files to discover and index content. Without them the site will not appear in any organic search results. Action: fix the 403 issue and create/submit a sitemap.xml to Google Search Console.

07 JavaScript & Third-Party Dependencies

Total script tags	0
External scripts	0
Third-party scripts	0
Inline scripts	0
Scripts missing SRI hash	0

No analytics trackers detected. Recommendation: deploy a self-hosted Matomo instance for GDPR/CNIL-compliant traffic measurement.

08 Cookie Security Analysis

No cookies were set in the homepage response. Once the 403 is resolved and authenticated pages are available, cookies must be audited for Secure, HttpOnly, and SameSite=Strict attributes.

09 Performance Analysis

HTML Response Size	104 bytes
Load Time	0.05 seconds
Compression	NO None
Cache-Control	Missing
ETag	Missing
Render-blocking scripts in head	0
Stylesheet files	0
Images with lazy load	0

■ Content compression (gzip/brotli) is not enabled. This can increase page payload by 60–80% and significantly degrades load times on mobile networks, which are common in Cameroon. Enable in nginx: gzip on; or Apache: AddOutputFilterByType DEFLATE

10 Traffic & Analytics Signals

Signal / Feature	Detected
Google Analytics (GA4)	NO
Google Tag Manager	NO
Facebook Pixel	NO
Hotjar (heatmaps)	NO
Matomo / Piwik (self-hosted)	NO
Microsoft Clarity	NO
Plausible Analytics	NO
Fathom Analytics	NO
Schema.org Structured Data	NO
Canonical URL tag	NO
Hreflang (multi-language)	NO
RSS / Atom Feed	NO

No analytics, tracking, or measurement tool was detected. Without analytics, the MINFOF web team has no visibility into: who visits the site, from where, which pages are most read, or where visitors drop off. Recommendation: deploy Matomo (self-hosted, CNIL-compliant) as the government analytics solution — it requires no data sharing with US tech companies.

11 Prioritised Action Plan

#	Priority	Action	Details
1	CRITICAL	Fix HTTP 403 on homepage	Investigate WAF rules, server config, and IP restrictions. The site must serve HTTP 200 to public visitors and crawlers.
2	CRITICAL	Renew TLS certificate (expires 21 Jul 2026 — 29 days)	Contact certificate authority or hosting provider immediately. Automate renewal with Let's Encrypt / Certbot.
3	CRITICAL	Add all 8 security headers	Add HSTS, CSP, X-Frame-Options, X-Content-Type-Options, Referrer-Policy, Permissions-Policy, X-XSS-Protection, Cache-Control in web server config.
4	CRITICAL	Enable gzip / brotli compression	nginx: add 'gzip on; gzip_types text/html text/css application/javascript;'. Apache: enable mod_deflate.
5	CRITICAL	Implement CSRF tokens on all forms	Use framework-level CSRF middleware (Django, Laravel, etc.) to auto-inject tokens on every form submission.
6	HIGH	Define a Content Security Policy (CSP)	Start with Content-Security-Policy: default-src 'self'; then progressively allow trusted CDN domains. Use report-only mode first.
7	HIGH	Restore / create robots.txt and sitemap.xml	Create /robots.txt with User-agent: * / Allow: / and a Sitemap: directive. Generate sitemap.xml and submit to Google Search Console.
8	HIGH	Add core SEO metadata	Add <title>, <meta name='description'>, <link rel='canonical'>, Open Graph tags, and Schema.org JSON-LD to every page.
9	HIGH	Deploy self-hosted Matomo analytics	Install Matomo on a government-controlled server. Configure it with IP anonymisation enabled for CNIL/GDPR compliance.
10	HIGH	Add Subresource Integrity (SRI) to CDN scripts	For every external JS/CSS: compute sha384 hash and add integrity= + crossorigin='anonymous' attributes.
11	MEDIUM	Fix mobile responsiveness	Add <meta name='viewport' content='width=device-width, initial-scale=1'>. Test on Android/iOS.
12	MEDIUM	Add hreflang for French/English	MINFOF content exists in French. Add <link rel='alternate' hreflang='fr' href='...'> and hreflang='en' for dual-language pages.
13	MEDIUM	Implement browser caching headers	Add Cache-Control: max-age=86400 for static assets. Add ETag and Last-Modified for dynamic HTML responses.
14	MEDIUM	Add lazy loading to images	Add loading='lazy' to all tags below the fold. This reduces initial page load time significantly.
15	MEDIUM	Add Permissions-Policy header	Example: Permissions-Policy: camera=(), microphone=(), geolocation=(), payment=(). Restricts browser API access.

1 6	LOW	Set HTML lang attribute	Add lang='fr' (or 'fr-CM') to the <html> element for accessibility and screen reader compatibility.
1 7	LOW	Add dns-prefetch / preconnect hints	For any third-party origin used (CDN, fonts, analytics): add <link rel='preconnect' href='https://...> in <head>.
1 8	LOW	Schedule dependency audits	Review CMS plugins, themes, and server packages quarterly. Subscribe to CVE alerts for your CMS (WordPress, Joomla, etc.).
1 9	LOW	Add an RSS/Atom feed	Allow citizens to subscribe to official communiqués and press releases via a feed reader.
2 0	LOW	Add Open Graph and structured data	Add Schema.org GovernmentOrganization JSON-LD. This improves Google Knowledge Panel and social media previews.
